| <b>Date</b>          | 2 July 2026                                 |
| <b>Team ID</b>       | xxxxxx                                      |
| <b>Project Name</b>  | Emotion Detection & Learning Support Engine |
| <b>Maximum Marks</b> | 3 Marks                                     |

### Project Executable Files

The **Emotion Detection & Learning Support Engine** includes all the required source code, trained BERT model, Streamlit application files, datasets, recommendation modules, chatbot integration, and dependency files needed to execute the project successfully. The project is organized into separate folders for better readability, maintenance, and future enhancements. A setup guide and dependency file are provided to help evaluators run the application in a local environment. **Step 1: Submission Checklist**

| S.No | Item to Submit                                           | (Yes /<br>Submitted<br>No / NA) |
|------|----------------------------------------------------------|---------------------------------|
| 1    | Complete source code (all files and folders)             | Yes                             |
| 2    | README / Setup Guide (instructions to run the project)   | Yes                             |
| 3    | requirements.txt / dependency file                       | Yes                             |
| 4    | Database schema / seed files (if applicable)             | NA                              |
| 5    | Environment configuration file (.env.example or similar) | Yes                             |

|    |                                                      |     |
|----|------------------------------------------------------|-----|
| 6  | Deployed application URL (if hosted)                 | No  |
| 7  | APK / Executable binary (if applicable)              | NA  |
| 8  | Dockerfile / Containerization config (if applicable) | No  |
| 9  | Test files and test results                          | Yes |
| 10 | Demo video or walkthrough (if required)              | Yes |

## Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

### Step 3: Deployment / Access Details

| Field                              | Details                                                                                                                                                                             |
|------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Hosted / Deployed URL</b>       | Not Deployed                                                                                                                                                                        |
| <b>Login Credentials (Demo)</b>    | Not Applicable                                                                                                                                                                      |
| <b>Platform / Hosting Provider</b> | Local Flask Server                                                                                                                                                                  |
| <b>Repository Link</b>             | <a href="https://github.com/lakshipriya/Emotion-Detector-Support-Learning-Machine-final">https://github.com/lakshipriya/Emotion-Detector-Support-Learning-Machine-final</a>         |
| <b>Demo Video Link</b>             | <a href="https://drive.google.com/file/d/13UBdAC0xU8z-5LLJjj5voZSeX4_UtWFg/view?usp=sharing">https://drive.google.com/file/d/13UBdAC0xU8z-5LLJjj5voZSeX4_UtWFg/view?usp=sharing</a> |

## Step 4: Run Instructions

Steps to run the application:

1. Install Python and the required libraries using `pip install -r requirements.txt`.
2. Open the project folder in Visual Studio Code.
3. Activate the virtual environment (if available).
4. Run `streamlit run app.py` in the terminal.
5. Open the generated localhost URL (usually <http://localhost:8501>)
6. Enter text describing your feelings or learning experience and click Analyze Emotion

to view the detected emotion, personalized recommendations, and AI-generated support. **Step 5:**

## Known Issues / Limitations

| S.No | Known Issue / Limitation                     | Workaround / Status                                                             |
|------|----------------------------------------------|---------------------------------------------------------------------------------|
| 1    | Application currently runs on a local server | Can be deployed to cloud platforms such as Streamlit Cloud or Render in future. |
| 2    | No user authentication or progress tracking  | Can be implemented in future versions.                                          |

|   |                                                                      |                                                                           |
|---|----------------------------------------------------------------------|---------------------------------------------------------------------------|
| 3 | Emotion prediction accuracy depends on the trained dataset and model | Accuracy can be improved by training on larger and more diverse datasets. |
|---|----------------------------------------------------------------------|---------------------------------------------------------------------------|
